**Versatility. Customization. Efficiency.**

# Innerspring

The Barber low height Bonnell Innerspring Units are manufactured in uniform finished heights ranging from 2¾" to 4½".

The springs in this unit are run, heat-tempered, and laced at the precise required height, so they are even and flat with a uniform carrying capacity.

The Units are designed to fold and unfold consistently at the proper point.

These low height Bonnell Units are used in sofa-sleepers, futons, dorm units, and are available in different sizes and coil counts in #13 gauge and #13½ gauge wire. Run in 253 and 312 coil counts.
