

THE
Marshall
Unit

Versatility. Customization. Efficiency.

The Marshall Unit

The result of careful engineering, the Marshall Unit by Barber Manufacturing Company provides comfort and durability. The highly adaptable product can be used for either seat cushions or backs in the finest upholstered furniture.

All coil springs are made from high-carbon wire specially formulated to suit the specific purpose of this unit. The coil springs are pre-tensioned to the correct height in durable material, allowing for years of proper resilience. The encased coils are either scrim-glued top and bottom or hog-rung together to provide the perfect fit and comfort.

These coils can also be purchased as continuous reels of individual springs for the manufacturer whose desire is a custom use.
