

# Upholstery Springs

Versatility. Customization. Efficiency.

# Upholstery Springs

Custom Design and quality are the hallmarks of Barber Manufacturing Upholstery Springs. Each spring for each customer is formed to achieve the correct height and tension for its particular application. Complete records are kept on file, and careful testing insures that every order will duplicate the preceding one. Our upholstery springs are ideal for 8-way hand-tied seating.

With one knotted end to provide ease of handling and assembly, the open end is neatly tucked away from your upholstery material. Top and bottom diameters are designed and produced to meet your specifications. We can customize the firmness of each individual spring through changes in the center diameter and wire gauge.

All of our upholstery springs are made from high-carbon spring wire, and are heat tempered to ensure resilience.
